SRM INSTITUTE OF SCIENCE & TECHNOLOGY
(Deemed to be University u/s 3 of UGC Act, 1956)

Research and Publication Ethics

MODULE 3

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Ethics: Definition

- Definition of Ethics
- Role of ethics in guiding behavior
- Importance in science and research

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Ethics in Science and Research

- Intellectual honesty
- Research integrity
- Responsible conduct of research

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Scientific Misconducts (FFP)

- Falsification: Manipulating data
- Fabrication: Making up data
- Plagiarism: Using others' ideas without credit

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

What Is Not Research Misconduct?

- Research misconduct does not include disputes regarding honest error or honest differences in interpretations or judgments of data, and is not intended to resolve bona fide scientific disagreement or debate.
- Misconduct must be committed intentionally, knowingly, or recklessly.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

What Is Research Misconduct?

"Research misconduct is defined as fabrication, falsification, or plagiarism in proposing, performing, or reviewing research, or in reporting research results."

– Office of Research Integrity (ORI), DHHS
http://ori.hhs.gov/misconduct/definition_misconduct.shtml

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

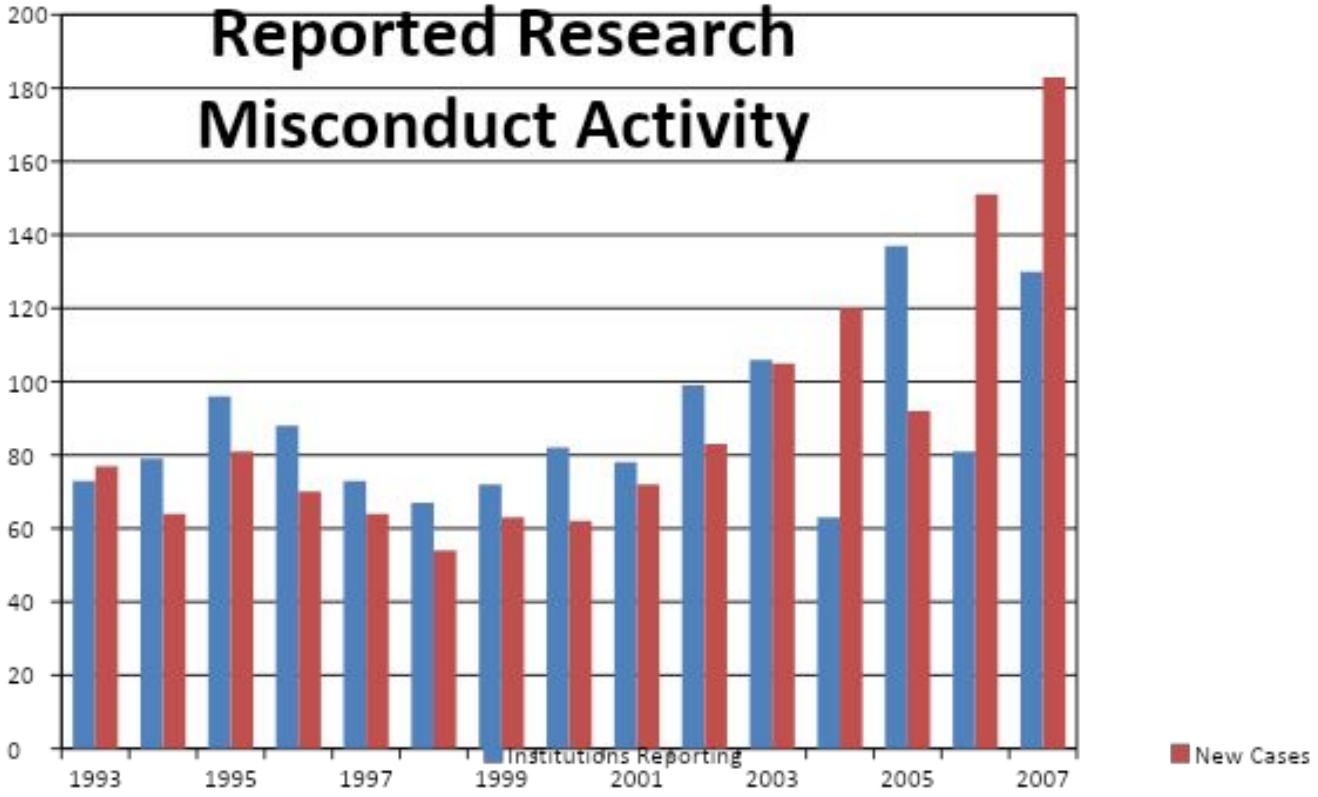
What Is Research Misconduct?

- Fabrication is making up data or results and recording or reporting them.
- Falsification is manipulating research materials, equipment, or processes, or changing or omitting data or results such that the research is not accurately represented in the research record.
- Plagiarism is the appropriation of another person's ideas, processes, results, or words without giving appropriate credit.

– UA Research and Scholarly Misconduct Policies and Procedures
http://vpred.uark.edu/Research_Scholarly_Misconduct.pdf

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

How Common Is Misconduct?



Office of Research Integrity Annual Reports, http://ori.hhs.gov/publications/annual_reports.shtml

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Self Plagiarism

An author publishing the same data in more than one journal, assuming that the data, figures, etc. are the same in both publications, is not considered research misconduct. (This does violate the rules of most professional journals.)

– *ORI Newsletter*, Vol. 15, No. 4, September 2007

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Authorship/Credit

According to the ORI plagiarism is "…*theft or misappropriation of intellectual property* and the *substantial unattributed textual copying* of another's work. It does not include *authorship or credit disputes*."

- "…theft or misappropriation of intellectual property includes the unauthorized use of ideas or unique methods obtained by a privileged communication, such as a grant or manuscript review.
- "Substantial unattributed textual copying of another's work means the unattributed verbatim or nearly verbatim copying of sentences and paragraphs which materially mislead the ordinary reader regarding the contributions of the author."

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Authorship/Credit

"… the collaborative history among the scientists often supports a presumption of implied consent to use the products of the collaboration by any of the former collaborators." These are commonly perceived as *authorship or credit disputes*, not plagiarism.

– ORI, DHHS
http://ori.hhs.gov/policies/plagiarism.shtml

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Reporting Misconduct

By federal regulation, institutions which receive federal funding must have policies and procedures in place to address the reporting and investigation of research misconduct.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Reporting Misconduct

"All institutional members will report observed, suspected, or apparent research misconduct to the RIO, the DO, or their designees. Prior to submitting a formal charge, a potential complainant is encouraged to consult informally with the RIO, the DO, or their designees to consider whether the case involves questions of research misconduct, should be resolved by other University procedures, or does not warrant further action."

– UA Research and Scholarly Misconduct Policies and Procedures

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Historical Examples of Misconduct

- Gregor Mendel – pea plant data is suspiciously “clean”
- Louis Pasteur – used a competitor’s vaccine, yet reported use of his own

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

More Recent Examples

- James David Lieber, UCLA (*ORI Newsletter*, Vol. 15, No. 4, September 2007)
  - Fabricated interviews for 20 research participants
  - Falsified the urine specimens for those 20 subjects
  - Caused the entry of false information the study tracking and locating database

  (Also stole incentive payment and travel expense reimbursements meant for participants.)

- Rebecca Uzelmeier, former doctoral student, MSU (*ORI Newsletter*, Vol. 15, No. 3, June 2007)
  - Fabricated /falsified data in her research notebook by multiple instances of using data/results generated from one experiment to represent data/results purportedly obtained from one or more entirely different experiments
  - Fabricated and falsified data in her thesis including autoradiographic films, computer image files scanned from those films, and numerical data reduced from those computer files

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Consequences

Your Name In Print

"Emily M. Horvath, Indiana University: Based on the Respondent's own admissions in sworn testimony and as set forth below, Indiana University (IU) and the U.S. Public Health Service (PHS) found that Ms. Emily M. Horvath, **former graduate student,** IU, engaged in research misconduct in research supported by National Center for Complementary and Alternative Medicine (NCCAM), National Institutes of Health…"

Consequences

Case Summary - Rebecca Uzelmeier

[Federal Register: April 4, 2007 (Volume 72, Number 64)]

[Page 16366-16367]

Findings of Research Misconduct

Ms. Uzelmeier's actions caused the withdrawal of a manuscript that had been submitted for publication, the withdrawal of her mentor's PHS grant application, and her dismissal from graduate school.

The following administrative actions have been implemented for a period of five (5) years, beginning on March 12, 2007:

(1) Ms. Uzelmeier has been debarred from any contracting or subcontracting with any agency of the United States Government and from eligibility or involvement in nonprocurement programs of the United States Government referred to as ``covered transactions'' as defined in the debarment regulations at 2 CFR 180 and 376; and

(2) Ms. Uzelmeier is prohibited from serving in any advisory capacity to PHS including but not limited to service on any PHS advisory committee, board, and/or peer review committee, or as consultant.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Consequences

Title 18 USC § 1001

(a) Except as otherwise provided in this section, whoever, in any matter within the jurisdiction of the executive, legislative, or judicial branch of the Government of the United States, knowingly and willfully—

(1) falsifies, conceals, or covers up by any trick, scheme, or device a material fact;

(2) makes any materially false, fictitious, or fraudulent statement or representation; or

(3) makes or uses any false writing or document knowing the same to contain any materially false, fictitious, or fraudulent statement or entry;

shall be **fined** under this title, **imprisoned** not more than 5 years or, if the offense involves international or domestic terrorism (as defined in section 2331), imprisoned not more than 8 years, **or both**.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Responding to Wrong Doing

- Suspecting a problem
- Assessing the problem
- Dealing with feelings – yours and others
- Choosing to act (or not)
- Taking Action
  - Informal action
  - Formal action

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Suspecting A Problem

Is it misconduct, “bad science” or just annoying behavior?

- Using faulty research design or outdated procedures
- Poor statistical analysis
- Carelessness
- Failing to meet IRB or IACUC guidelines
- Lack of supervision or training
- Authorship dispute

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Assessing the Problem

- Firsthand knowledge or gossip?
- Direct evidence – actual data logs or copies or original results
- Confessions
- Inability to replicate results
- Distinct change in writing/composition skills

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Dealing with Feelings

- Appearing disloyal
- Afraid of the negative publicity or lack of institutional support
- Harming your own career
- Retaliation
- Too small to cause a significant problem
- Not wanting to hurt someone
- Feeling too overwhelmed to take on something else at the time
- Fear of being sued

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Choosing to Act (or Not)

- Factors that affect the choice
  - Your own moral principles
  - Perceived degree of potential harm
  - Perceived motivations of the suspected individual
  - How “abhorrent” the act is to you personally
  - Your degree of self-confidence/insecurity
  - How you would feel if the act resulted in harm to others
  - Personal vulnerability

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Making the Choice Easier

- Know the rules of responsible science in advance.
- Form or join an alliance of colleagues who have an interest in upholding responsible science..
- Carefully monitor the relationship between you and those with whom you work.
- Never rely solely on your memory after intervening in a crisis.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Choosing to Act – Formal or Informal

Informal

Informal intervention is not bound by strict investigative rules. There is a solid potential for a collegial problem-solving meeting, as opposed to an adversarial process. A problem may be prevented or fixed without the issue‘s becoming public.

Formal

Formal intervention is more appropriate for some kinds of issues, particularly more serious and clear-cut ones or when a pattern seems to be at issue. More resources are typically available for handling the matter

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Redundant Publications

- Duplicate publications
- Overlapping publications
- Salami slicing of data

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Introduction to Salami Slicing

- Definition: Breaking research into smaller parts to publish multiple papers
- Also known as 'fragmented publication'
- Seen as a form of publication misconduct

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Why Researchers Do Salami Slicing?

- Pressure to publish (publish or perish culture)
- Career advancement and promotions
- Increasing citation count
- Meeting institutional/academic requirements

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Examples of Salami Slicing

- Publishing the same dataset in multiple journals with slight variations
- Splitting one large study into multiple smaller papers unnecessarily
- Reusing similar research questions with minimal new data

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Ethical Concerns

- Misleads the scientific community
- Wastes journal resources
- Devalues genuine research contributions
- May distort evidence if included in systematic reviews/meta-analyses

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Guidelines and Standards

- COPE (Committee on Publication Ethics) discourages salami slicing
- Journals often require disclosure of related publications
- Transparency and honesty in reporting research

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

How to Avoid Salami Slicing

- Publish comprehensive studies instead of fragmented ones
- Clearly define study objectives before conducting research
- Consult mentors and follow institutional ethics guidelines
- Disclose related work during submission

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Conclusion

- Salami slicing undermines research integrity
- Researchers should aim for quality over quantity
- Upholding publication ethics strengthens scientific credibility

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Selective Reporting & Misrepresentation

- Withholding negative results
- Exaggeration or bias in data presentation

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Publication Ethics: Introduction & Importance

- Ensures transparency
- Maintains credibility
- Builds public trust

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Standards & Guidelines

- COPE: Committee on Publication Ethics
- WAME: World Association of Medical Editors
- Other standards in research ethics

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Publication ethics:

- Publication ethics refers to the principles and standards that guide the behaviour of individuals involved in the publication process, including authors, editors, reviewers, and publishers.
- They encompass various aspects such as honesty in reporting research findings, proper attribution of authorship, avoidance of plagiarism and the responsible handling of conflicts of interest.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Importance:

- **Integrity and Credibility**: Upholding ethical standards ensures that the research published is accurate, reliable and trustworthy.
- **Prevention of misconduct:** Ethical guidelines help prevent misconduct such as plagiarism, data fabrication and falsification
- **Recognition and Accountability:** Proper attribution of authorship and contributor ship ensures that individuals receive appropriate credit for their work
- **Conflict of Interest Management:** Ethical practices require the disclosure and management of conflicts of interest
- **Promotion of Fairness:** adhering to ethical standards promotes fairness in the review and publication process.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Standards setting initiatives in publication ethics

Committee on Publication Ethics (COPE):

Overview: COPE provides resources and support for editors and publishers to promote integrity in research and its publications

Guidelines: COPE'S guidelines cover various aspects of publications ethics, including authorship, conflicts of interest, and misconduct. handling

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Standards setting initiatives in publication ethics

World association of Medical Editors (WAME):

Overview: WAME is a global organization of editors of peer-reviewed medical journals.

Guidelines: WAME's principles focus on transparency, best practices in scholarly publishing, and promoting ethical standards.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Standards setting initiatives in publication ethics

International Committee of medical Journal Editors (ICMJE):

Overview: ICMJE provides recommendations for the conduct, reporting, editing and publication of scholarly work in medical journals.

Guidelines: ICMJE's guidelines address issues such as authorship, conflicts of interest, and ethical considerations in research.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Standards setting initiatives in publication ethics

Directory of Open Access Journals (DOAJ):

Overview: DOAJ is a community-curated online directory that indexes and provides access to high-quality, open-access, peer-reviewed journals.

Guidelines: DOAJ's principles emphasize transparency, best practices, and ethical standards in open-access publishing.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Conflicts of Interest

- **Definition:** A conflict of interest occurs when an individual's personal, financial, or professional interests have the potential to influence their objectivity, integrity, or judgment in conducting or reporting research.
- **Examples of Conflicts of Interest**

1. **Financial Ties:** Receiving funding, grants, or personal payments from organizations that may benefit from the research outcomes.
2. **Personal Relationships:** Collaborating with friends, family members, or colleagues where personal relationships may affect impartiality.
3. **Academic Competition:** Situations where researchers compete for recognition, funding, or career advancement, potentially leading to biased reporting.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Management of Conflicts of Interest

1. **Disclosure:** Researchers must disclose any potential conflicts of interest to their institutions, funding bodies, and in their publications.
2. **Transparency:** Full transparency about potential conflicts helps maintain trust and credibility in the research process.
3. **Institutional Policies**: Institutions should have clear policies and procedures for managing conflicts of interest, including guidelines for disclosure and review.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Importance of Managing Conflicts of Interest

1. **Maintaining Objectivity**: Ensures that research findings are based on unbiased and objective analysis.
2. **Building Trust:** Transparency about conflicts of interest helps build trust among the scientific community and the public.
3. **Preventing Misconduct**: Proper management of conflicts of interest reduces the risk of unethical behavior and research misconduct.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Publication Misconduct

- **Definition:** Publication misconduct refers to unethical behavior in the process of publishing scientific research. This includes actions that compromise the integrity, credibility, and reliability of scholarly communication.
- **<u>Concept and Problems Leading to Unethical Behavior</u>**
  - **Pressure to Publish:** Researchers often face immense pressure to publish frequently for career advancement, funding, and recognition.
  - **Lack of Awareness**: Inadequate training in research ethics can lead to unintentional misconduct.
  - **Competitive Environment**: The competitive nature of academia can drive researchers to cut corners or engage in unethical practices.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Types of Publication Misconduct

- **Plagiarism:** Using someone else's work or ideas without proper attribution.
- **Data Fabrication**: Making up data or results.
- **Data Falsification**: Manipulating research data to produce desired outcomes.
- **Inappropriate Authorship**: Including individuals who did not contribute significantly to the research or excluding those who did.
- **Duplicate Submission**: Submitting the same manuscript to multiple journals simultaneously.
- **Salami Slicing**: Dividing one significant piece of research into several smaller publications.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

- **Violation of Publication Ethics**

Examples: Plagiarism, duplicate publication, data manipulation.

Consequences: Retractions, loss of credibility, legal actions.

- **Authorship and Contributor ship**

Guidelines: Follow criteria set by organizations like ICMJE for determining authorship.

Responsibilities: Ensure proper acknowledgment of contributions and accountability for the published work.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

- **Identification of Publication Misconduct**

  Tools: Plagiarism detection software, peer review.

Processes: Editorial checks, institutional investigations.

- **Complaints and Appeals**

Process: Clear procedures for handling complaints and appeals related to publication misconduct.

Guidelines: COPE's flowcharts and best practices for managing complaints.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Predatory Publishers and Journals

- **Definition:** Predatory publishers and journals are exploitative entities that prioritize self-interest over scholarly integrity. They often engage in unethical practices such as misleading information, lack of proper peer review, and aggressive solicitation of manuscripts.
- **Characteristics of Predatory Publishers**

1. **Misleading Information:** They provide false or deceptive information about their editorial board, impact factor, and indexing.
2. **Lack of Peer Review:** They often bypass the rigorous peer review process, leading to the publication of low-quality or unverified research.
3. **Aggressive Solicitation:** They frequently send unsolicited emails to researchers, urging them to submit their work for a fee.
4. **High Fees:** They charge exorbitant publication fees without providing the editorial and publishing services that legitimate journals offer.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Identification of Predatory Journals

- **Beall's List:** A well-known resource that lists potential predatory publishers and journals.
- **Think. Check. Submit.:** An international initiative that helps researchers identify trustworthy journals.
- **Lack of Transparency:** Predatory journals often lack transparency in their operations, including unclear publication fees and editorial processes

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Impact of Predatory Publishing

1. **Undermines Scientific Integrity:** The publication of unverified or low-quality research can mislead other researchers and the public.
2. **Wastes Resources:** Researchers may waste time and money on publishing in predatory journals, which do not contribute to their academic reputation.
3. **Damages Careers:** Publishing in predatory journals can harm a researcher's credibility and career prospects.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

How to Avoid Predatory Journals

1. **Research the Journal:** Verify the journal's reputation, editorial board, and peer review process.
2. **Consult Trusted Lists:** Use resources like Beall's List and the Directory of Open Access Journals (DOAJ) to identify legitimate journals.
3. **Seek Advice:** Consult colleagues, mentors, or institutional librarians for recommendations on reputable journals.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Sharing or publishing the contents in part or full is liable for legal action.

Identification, Complaints & Appeals

- How misconduct is identified
- Complaint procedures
- Appeals and resolutions

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Predatory Publishers & Journals

- **Definition of predatory publishing**
- Predatory publishers are fraudulent academic publishing services that charge authors fees for publication while failing to provide legitimate services like peer review, editing, and archiving.
- **Characteristics of predatory journals**
- **Risks to researchers and the community**
- These deceptive entities exploit researchers' pressure to publish for academic promotion or tenure by making false claims about their quality and offering quick publication without proper scholarly vetting.

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

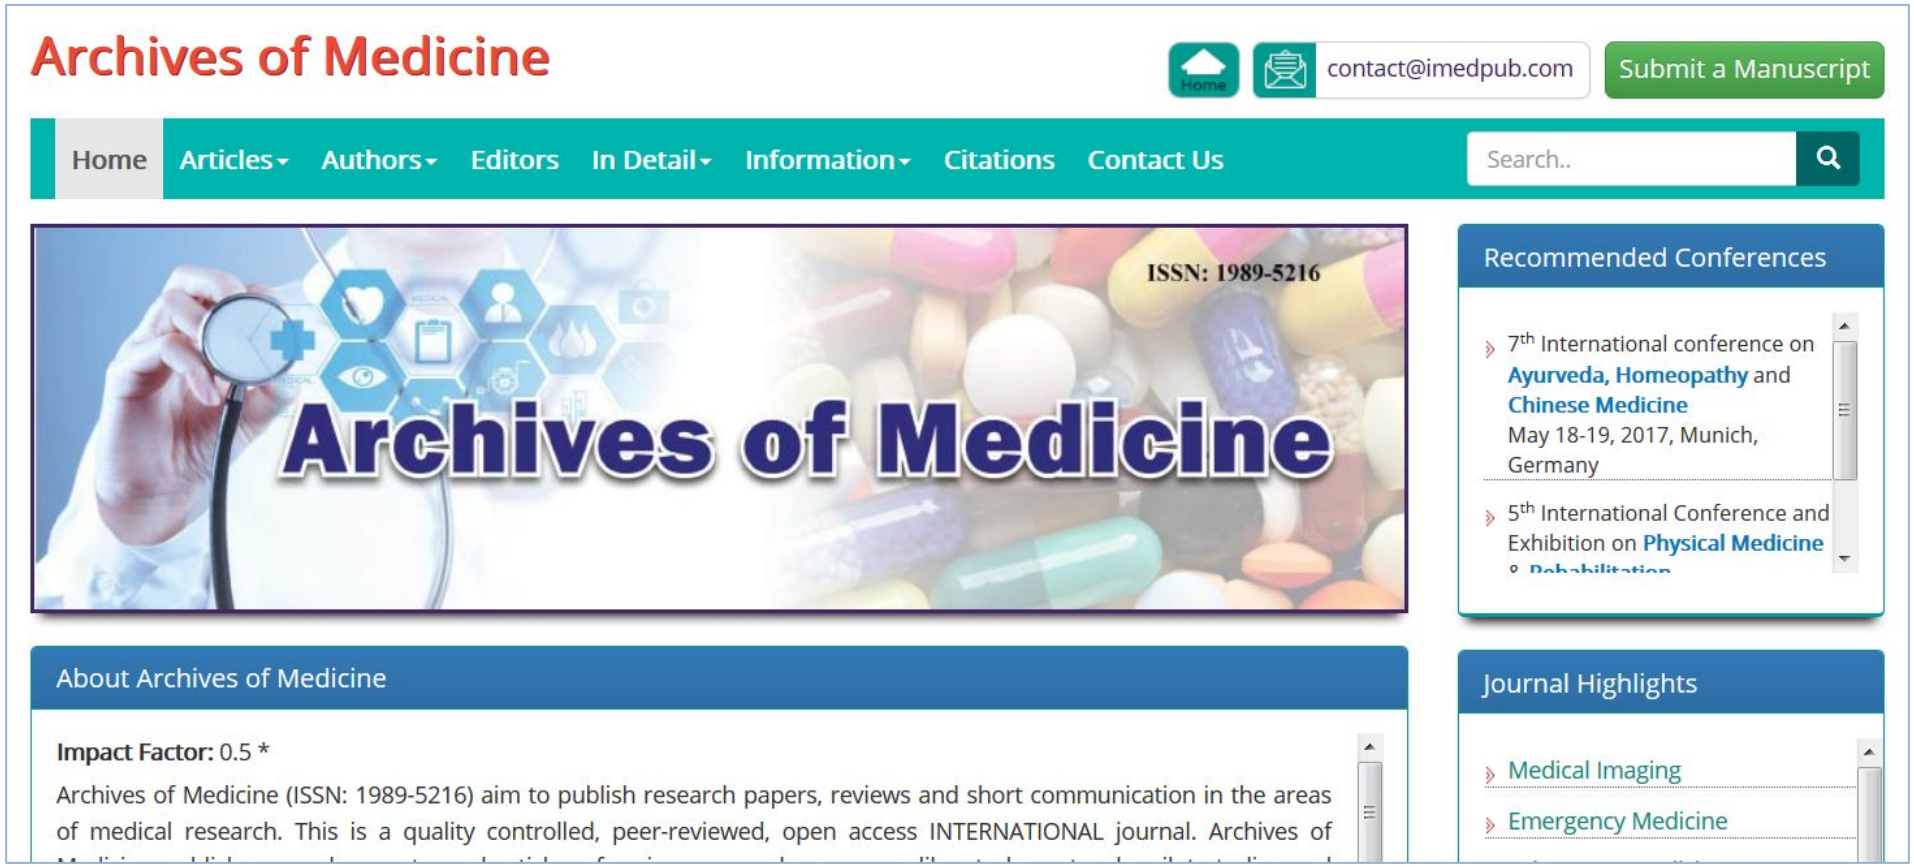
SRM INSTITUTE OF SCIENCE & TECHNOLOGY
(Deemed to be University u/s 3 of UGC Act, 1956)

Sample website



This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Publishing practices

- In 2014 publishers launched 1000 new journals
- In 2014, 420,000 articles published in predatory journals
- The larger predatory publishers purchase legitimate journals or smaller publishers
- Some have recently cancelled contracts with OMICS:
  - Can J Gen Int Med
  - Can J Optometry

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Objectionable practices

- Use names on editorial boards without consent or change names on photos (see Ottawa Citizen link)
- Invitations to fake conferences
- Become members of legitimate organizations such as COPE (Committee on Publication Ethics)
- Easily get an ISSN or a fake impact factor

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Authors beware

- Beall's Black list has been removed from the Internet
- White lists are not reliable:
  - Anyone can submit articles to PubMed
  - University libraries purchase journals in bulk
  - Predatory journals lie about impact factors
  - They lie about being indexed in Medline/Pubmed
- If you try to retract, they will publish anyway and require payment.
- Helpful website: thinkchecksubmit.org

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Why does it matter?

"I just ignore any unsolicited requests to publish"

BUT:

- As co-author, do you know the journal chosen by the PI?
- Are you checking references for a faculty position or for a conference keynote speaker?
- Are you helping graduate students choose a journal to publish their work?
- Are you able to evaluate such papers when you are reading?

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Conclusion

- Importance of maintaining ethics
- Role of institutions and individuals
- Fostering a culture of integrity in research

This file is meant for personal use by dominic097@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.
